

解方程

$$u = f(r), r = \sqrt{x^2 + y^2 + z^2}, \nabla^2 u = 0$$

化简为

$$\frac{2}{r}u' + u'' = 0$$

$$\Rightarrow (r^2 u')' = 0$$

$$\Rightarrow u = -\frac{C_1}{r} + C_2$$

带入边界条件  $f(1) = f'(1) = 1$

$$f(r) = 2 - \frac{1}{r}$$
